SHIP AND SHIPMENTS

Saline Change shipping directions
Salmon Change shipping date to
Salute Duplicate order for
Salvage Get ready for shipment but hold for instructions
Sampler Refer to your order number—
Sanctify When will you ship?
Sanction How soon can you ship?
Sandal Specifications not clear, advise
Sandy By what route did you ship order to—
Sanguine . . . If you cannot ship at once, approximate shipping
 date
Sanitary Shipping weight, approximate number of lbs.
Satisfy Ship the following samples
Sauce Send prepaid and charge on bill
Scald Ship at once by express
Scamper Ship at once by freight
Scanty Ship at once by Exp. C. O. D.
Scarcity Ship at once by Frt. B/L attached
Scenic Send tracer after shipment
Sago Shipment is being vigorously traced
Sage Advise correct name of consignee and destination
Sap We have made complete shipment of all orders

Scheme Ship with other goods the following
Scholar When was order shipped to—
Schooner We can ship in following number of days
Science We will ship today
Scissors We will ship tomorrow
Scrape We will ship latter part of week
Scribe We will ship early part of next week
Selfish We will ship latter part of next week
Sense We cannot promise to ship before
Shingles We can make immediate shipment
Shirk We made partial shipment on
Skull We made complete shipment
Skurry Advise on what basis C. O. D. Billing is to be
 rendered
Sky Shipment is now in course of transit
Skylark Order was shipped on the following date exclud-
 ing the following items about which we are
 writing you
Skylight Order will be shipped on the following date ex-
 cluding the following items about which we
 are writing you

BRASCOLITE ILLUMINATION

More Efficient	Better Quality	Uniform Distribution
Good Ventilation	Less Drop in Efficiency	Easier to Maintain
		Excellent Construction

THE HIGH EFFICIENCY of the Brascolite is obtained by the unique and relative positions of the lamp, bowl, and reflector, diffusing and reflecting the light to the working plane with a minimum loss. Photometric tests indicate an average efficiency of the Brascolite of over 80 per cent. By comparison with photometric tests of direct reflectors you will find that it is more efficient than 90 per cent of the direct reflectors and that it shows an average efficiency of effective lumens on the working plane of 65 per cent as against an average efficiency of 35 per cent for ordinary semi-indirect systems and of about 25 per cent for indirect systems.

THE QUALITY of the light and the **UNIFORMITY OF DISTRIBUTION** are as good as any artificial light produced by any method, due to all light rays being diffused through the glass or reflected from the white plane.

THE DROP IN EFFICIENCY is less in Brascolites than with direct reflectors, ordinary semi-indirect units or indirect units. Comparative tests under identical conditions indicated a 3 per cent drop in the Brascolite, a 5 per cent drop in the direct reflected light, 7 per cent drop in the indirect units and an 8½ per cent drop in an ordinary semi-indirect fixture. This comparison not only shows that the **MAINTENANCE** cost with the Brascolite system is less than with other systems, but also shows that a constant saving in current consumption is effected. This low rate of depreciation is due to the construction of the fixture, which eliminates the rapid accumulation of dust and provides perfect ventilation. The adjustable feature of the new hook support makes it possible to easily position the bowl in proper relation to the lamp filament, thereby eliminating shadows from the reflector and halos from the ceiling.

MECHANICAL FEATURES are simple, substantial and practical. Brascolites are made and shipped complete for installation on any standard outlet. They are packed in unit cartons made to railroad specifications and can be delivered on the job without assembling.

The **INDUSTROLITE** shown on page 27 is a new development for factory lighting, providing highly efficient illumination with absence of glare. Its use promotes safety, and increases production.

The **AGLITE**, a new all glass fixture with marble-like appearance, is the ideal lighting unit for use in bathrooms, hospitals, or wherever sanitation or cleanliness are essential. It harmonizes with hospital furniture and will not discolor or become tarnished.

The **E-LITE**, a new all glass ornamental unit is a most beautiful and efficient unit for bedrooms, reception halls, small parlors, under balconies in hotels and other locations where the unit must harmonize with decorative surroundings.

Catalog No. 10 (this issue) supersedes all previous catalogs, and prices become effective June 1st, 1923, and are subject to change without notice. Prices are for fixtures complete (excepting lamps), including packing, cartons, crates and cartage f. o. b. St. Louis, Missouri. Shipping weights given are approximate and are not guaranteed.

NOTE.—All Prices in previous Catalogs are withdrawn and new prices will be quoted on application.

The fixtures shown in this Catalog, with a few exceptions, are patented.

Brascolites, particularly, are thoroughly protected by both mechanical and design patents.

All rights created by the patents are reserved and will be fully protected.

LUMO-VITRO SWITCH PLATES

PORCELAIN ENAMELED

A NEW, NOVEL SWITCH PLATE

FOR HOSPITALS, HOTELS, HOMES, STORES, OFFICE BUILDINGS, ETC.

A Switch Plate that will Outlast the Building in which it is installed
Packed in Individual Cartons, including Nickel Plated Screws
Single Gang Push S-20043 Standard Package of 25 at.....\$0.25 Each
Two Gang Push S-20044 Standard Package of 25 at......60 Each
Three Gang Push S-20045 Standard Package of 25 at......90 Each
Single Gang Plug S-20046 Standard Package of 25 at......25 Each

Plates can be furnished up to Twelve Gangs at 50c per gang
Also furnished in Pale Pink, Pale Blue, Brown, Gray and Old Ivory
Colors at 10 cents per plate additional
Can be furnished for any type Toggle or Signal Switches at same prices

**LESS THAN STANDARD
PACKAGE
20% ADDITIONAL**

in Both Fixtures.

CHAIN HANGERS

All standard ceiling type Brascolites may be converted to three-chain suspension types by the addition of standard chain hangers. These hangers are packed in unit cartons, including all necessary parts for installation, and are furnished in plated finish to match the fixtures for which they are intended. The construction is in accordance with underwriters' rulings, and when used with Brascolite fixtures provide a complete approved appliance.

When fixture using standard chain hangers are ordered in lengths exceeding 4 feet, the extra lengthening will be made with single chain, as illustrated by Sketch 39.

Use Numbers Given Below for Convenience when Ordering Parts to Replace Breakage, Etc.

CHART FOR CALCULATING BRASCOLITE ILLUMINATION

Select the foot candle intensity required for the service. Locate this value on the scale "A" at left-hand margin and trace horizontally to the right to intersection with curved line, then down to lower margin where square feet may be read from scale "C". The value thus obtained will be the area which can be lighted with 100 watts; divide actual area to be lighted by the value obtained and multiply the result by 100, which will give you the wattage for the entire area.

The chart may be used in reverse order to determine foot candles which will be produced in a given space by a lamp of given size.

To determine either spacing or mounting height when either factor is known, select on scale "B" or "D" the known factor (mounting height or spacing respectively) and trace to diagonal line then to margin for other factor.

Values obtained by this method may be considered approximately correct for mounting heights of 10'0". To obtain correct values for additional heights up to 17'0" increase the wattage determined by the chart method by the following percentage:

11'0" add 5%	to the value for 10'0"	15'0" add 36%	to the value for 10'0"
12'0" add 11%	" " " "	16'0" add 47%	" " " "
13'0" add 17%	" " " "	17'0" add 59%	" " " "
14'0" add 26%	" " " "		

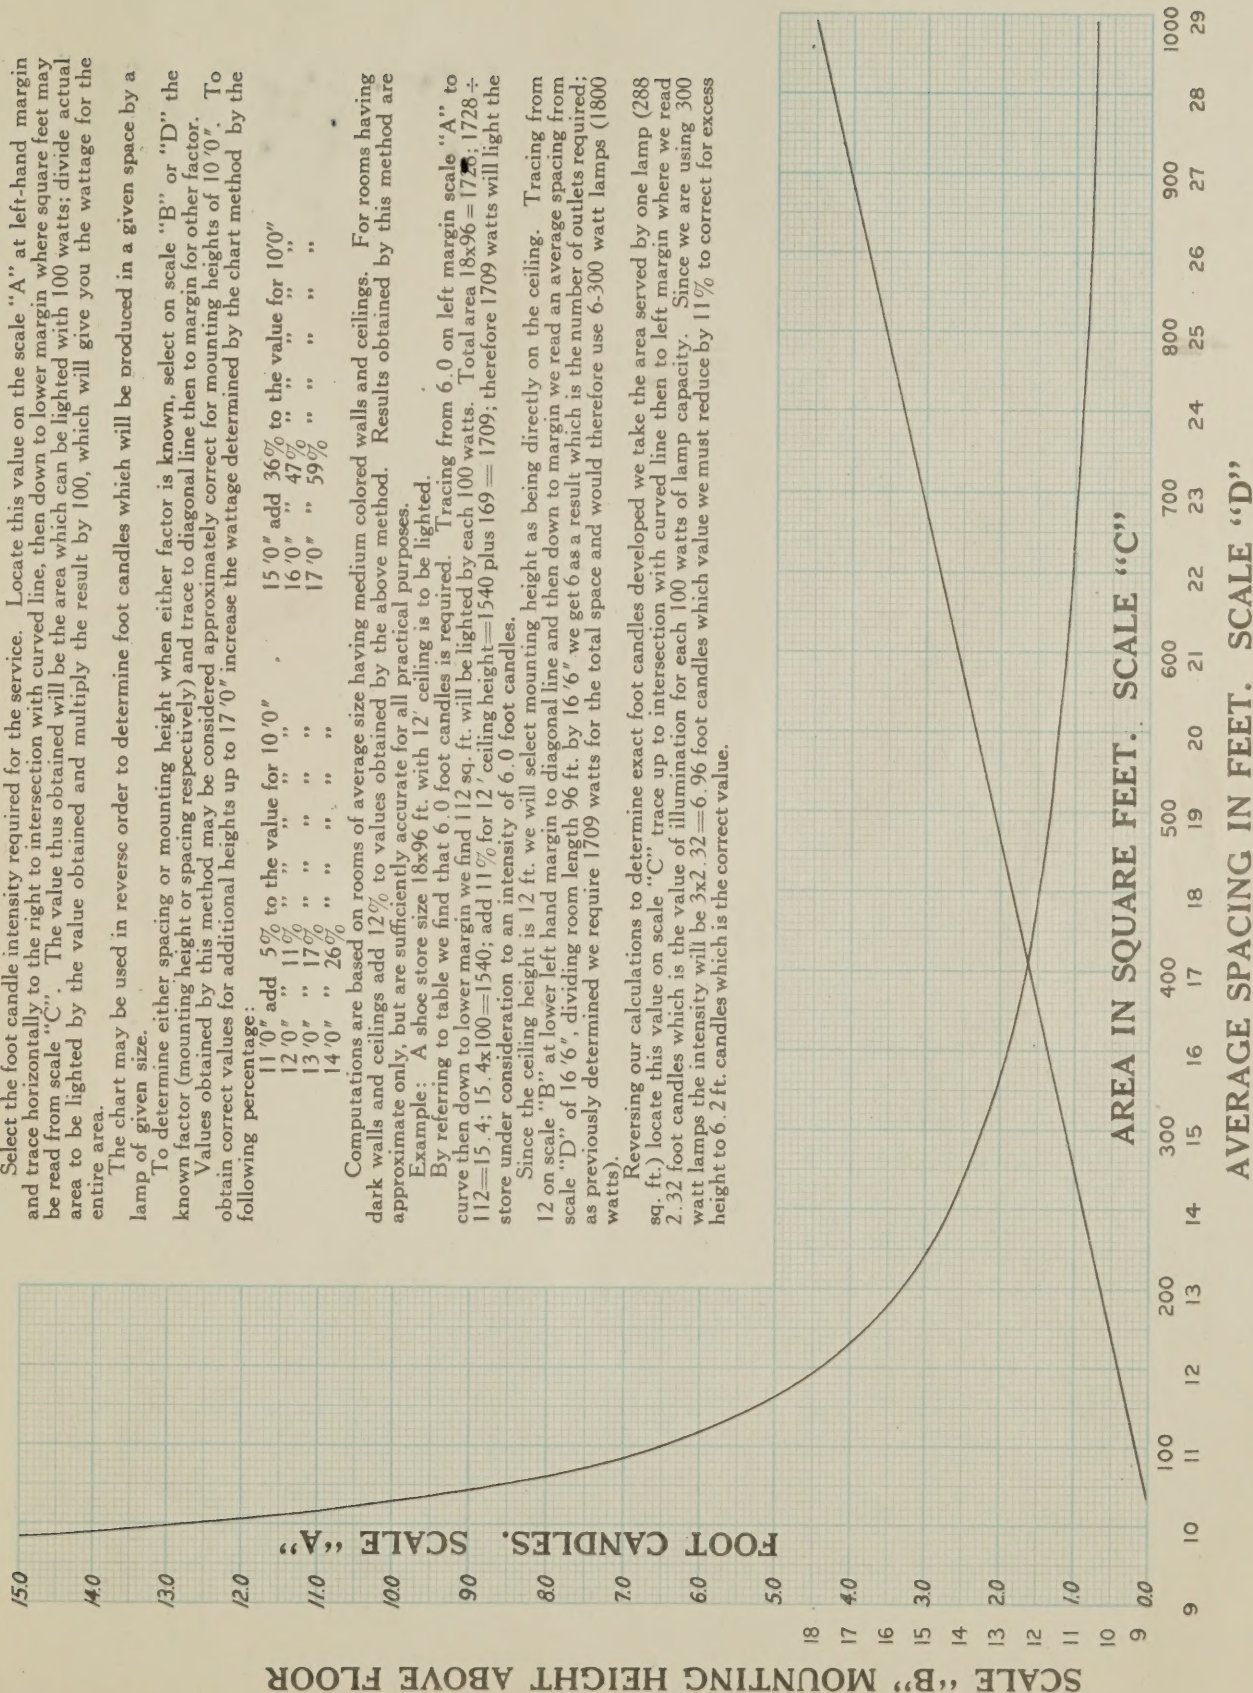

Computations are based on rooms of average size having medium colored walls and ceilings. For rooms having dark walls and ceilings add 12% to values obtained by the above method. Results obtained by this method are approximate only, but are sufficiently accurate for all practical purposes.

Example: A shoe store size 18x96 ft. with 12' ceiling is to be lighted.

By referring to table we find that 6.0 foot candles is required. Tracing from 6.0 on left margin scale "A" to curve then down to lower margin we find 112 sq. ft. will be lighted by each 100 watts. Total area $18 \times 96 = 1728$; $1728 \div 112 = 15.4$; $15.4 \times 100 = 1540$; add 11% for 12' ceiling height $= 1540$ plus 169 = 1709; therefore 1709 watts will light the store under consideration to an intensity of 6.0 foot candles.

Since the ceiling height is 12 ft. we will select mounting height as being directly on the ceiling. Tracing from 12 on scale "B" at lower left hand margin to diagonal line and then down to margin we read an average spacing from scale "D" of 16'6", dividing room length 96 ft. by 16'6" we get 6 as a result which is the number of outlets required; as previously determined we require 1709 watts for the total space and would therefore use 6-300 watt lamps (1800 watts).

Reversing our calculations to determine exact foot candles developed we take the area served by one lamp (288 sq. ft.) locate this value on scale "C" trace up to intersection with curved line then to left margin where we read 2.32 foot candles which is the value of illumination for each 100 watts of lamp capacity. Since we are using 300 watt lamps the intensity will be $3 \times 2.32 = 6.96$ foot candles which value we must reduce by 11% to correct for excess height to 6.2 ft. candles which is the correct value.
